

HOW PHOTOSYNTHESIS WORKS

By : Ava Watson

- **Photosynthesis is a process that the plant goes through. Each day the plant absorbs the sunlight through the leaves and absorbs water through its roots .**
- **When carbon dioxide is inhaled by a plant it turns in to oxygen which is exhaled through its leaves .**

- This is a diagram on how the plant gets its nutrients.

- 
- Fun fact: did you know plants have multiple lung (WELL there not lungs but they work the same) .
 - Fun fact : did you know plants are as complicated as the human body .
 - Fun fact : a plant has millions of cells in just one leaf Imagine how many is just in one plant .

- Here are some videos on photosynthesis
- The channels are Crash course , peekaboo kids and designate pvt ltd

Where I got this information

- YouTube
- Wikipedia
- And I got the picture from safari
