Day9

Observation=The seed coat is coming off and I think now the germinated seed is ready to go into the soil to get the rest of nutrients for further growth.

Day 9:

Write your log entry here: observations, hypothesis, prediction, next steps!

[CM] Communication

Some of the steam of the garlic cloves are sprouting now. I think, in a couple of days, the leaves and stems will grow out, because of the rate they are growing out.

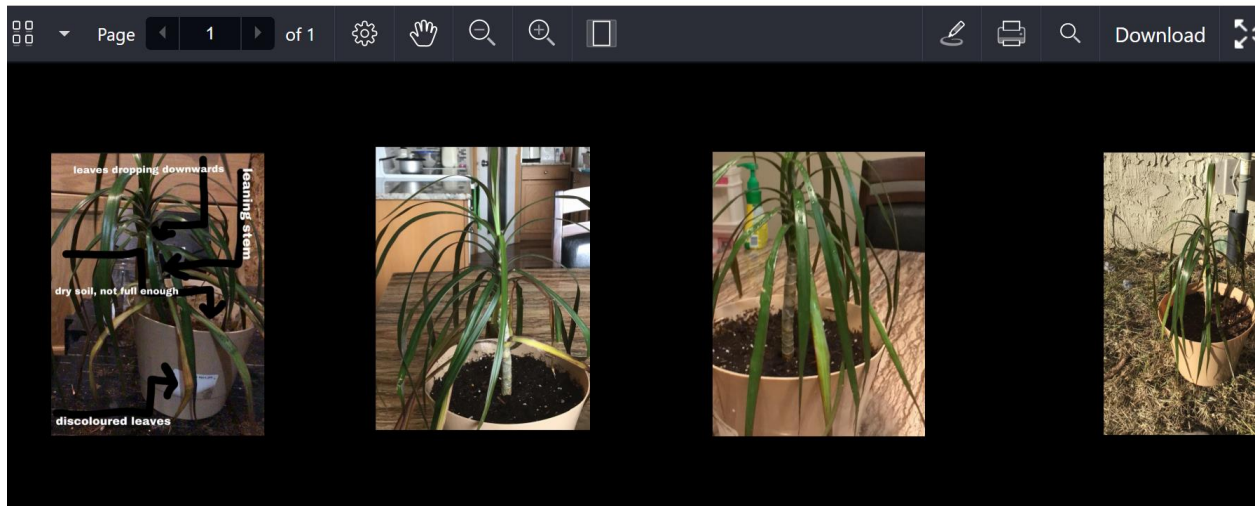

[RS] Reasoning

Tip! Can you "select" the best seeds to be more successful? What is this practice called? Explain!

The one with 2 prongs is the one I'd say is seeming to be more successful. This practice is called selective breeding.

Day 1

This is a seed putten in a ziploc bag on a wet paper towel so it gets moisture and for warmth my bag is placed in a drawer because these are two main needs of a seed.

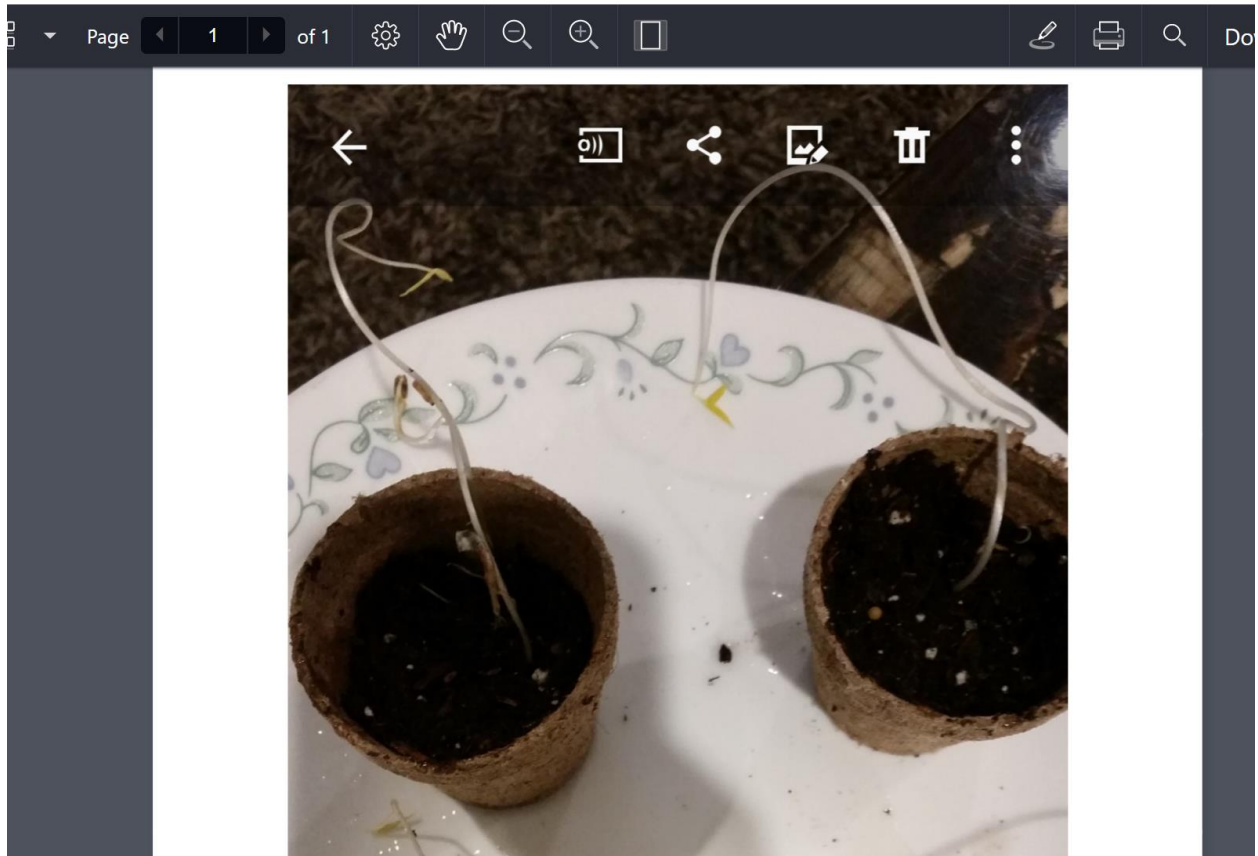

Day 2

Now the seed has grown a an embryo and seed coat is

Get Growing Challenge

 [Plant..jpg](#) (2.31 MB)

By: AnaSofia San Martin Submitted: Feb 13, 2021 11:42 AM

Conclusion:-

I learned that the seed grew from the plant. Coriander seed germination and then after some day the green leaves came.

Results:-

My hypothesis was true, my seed to grow. The indoor plant is grown.
