

Non-Renewable Energy!

Coal, natural gas, oil

non renewable energy = products = useful
Eg: plastic

Can be stored and carried to other places in the world

danger/hazard broken or moved

Make more money

stored small amount = large amount of power

Cost is very expensive

runs out if everyone uses it

You don't have monthly bills!!!!

Renewable Energy

wind, water, sun, wood,

resource forever

not reliable

Can be stored and carried to other places in the world

Non renewable energy is reliable.

possible failing

extracting the resource is dangerous

Convenient (don't have to wait)

never runs out

does not need to be fixed often

healthier option (i do not know how to spell)

Cost efficient over long period of time

cost money to build machine to get the resource

runs out

Use natural resources in the country

Business's control/ Manipulate market

location / country / seasons not dependable

poor depend on for lively hood

Safer for people using and working with

Modern/ Technology compatible (stove, BBQ, Heat)
