

Types of transportation that release harmful emissions are a major contributor to air pollution.

More air pollution means an increase in negative health impacts that are associated with inhaling polluted air. Making the switch to cleaner and greener types of mobility will help both the environment and public health.

The COVID-19 pandemic has encouraged people to ride bikes and engage in smarter mobility!

SMART MOBILITY

Mobility directly impacts quality of human life and climate change. Many cities across the world are transitioning to smarter and greener transportation. Electric cars, scooters, and bikes are modes of transportation that cities are trying to shift to.
