

The Solution
is Less
Pollution

Bike sharing is a prime example of smart mobility. Since biking releases no emissions and is a perfect way to exercise, it is healthy for both humans and the environment.

SMART MOBILITY

About one-quarter of global CO2 emissions are from transportation vehicles. Switching from environmentally harmful vehicles such as cars to environmentally-friendly vehicles like bikes is crucially important in combating climate change.

Smart mobility is the perfect solution to traffic jams and inefficient transportation (Geotab, 2018). The more people opting to ride bikes instead of driving cars the more efficient transportation can become!
