

How do you commute?

Transportation accounts for 28% of global emissions (United States Environmental Protection Agency, 2020). It is important to keep our world in mind when choosing our modes of transportation

Traveling solo in a car is bad for the environment

Cars release a lot of greenhouse gas. Limiting the distance you travel in a personal vehicle will drastically reduce your carbon footprint

Using and advocating for cleaner transportation makes being environmentally friendly more accessible

Air travel is a big source of pollution

Exploring new horizons is hard to give up. Why save a world you can't explore? but there are ways to fly more eco friendly. Offsetting your flights is a way to donate towards initiatives that take as much CO2 out of the atmosphere as you put in (Ontheluce, 2021). This isn't a perfect solution so it is important to advocate for cleaner air travel options

If you can't quite yet ditch the car there's hope for you yet!

There are ways to make your car more fuel efficient and eco friendly. Make sure your car is in good shape so that it can run efficiently. Reducing weight and drag by removing extra items and keeping the car aerodynamic will also increase efficiency (Shell, 2020). Limit the use of energy demanding features like air conditioning.

Cities have many options for public transportation

Public transportation allows many people to travel in the same vehicle, drastically reducing the emissions per person. Public transportation is relatively convenient and affordable and is a great eco friendly option for those who live in cities.

Consider walking or biking short distances

Walking and biking are 100% eco friendly modes of transportation and are good for your health!

Car sharing is better for the environment and your wallet

Car sharing allows you to use a car when you need one without owning your own individual vehicle. Car sharing decreases the amount of cars on the road and makes you choose other transport options when you don't need to take a car (Intelligence Squared, 2013). The cost of the car and its maintenance is not your responsibility alone so it is more affordable.
