

Do I really need my computer?

Explanation/ Reasons: One reason I don't need my computer is because I barely use it and I have a laptop plus if I didn't have a laptop I could borrow my mom's laptop.

My second reason is that I could use my tablet and phone so I think i'm fine.

My third reason is that I think it takes up too much power and we need money for food and other things.

My fourth reason is that it's really old and laggy.

My fifth reason is it's in the living room and my mom's boyfriend watches tv a lot so I would need it quiet sometimes so I would use my laptop.

My sixth reason is that the printer is beside the computer and sometimes my mom needs it almost hits me.

My last reason is that it takes like a minute to turn on when my laptop takes like 10 seconds.
