

# **Do I really need**

**\_\_\_\_\_toaster\_\_\_\_\_?**

**Explanation/ Reasons: I have plugged in too many appliances in my house. They consume a lot of energy and make my electricity bill go really high. Now, I have decided that I am going to unplug my toaster and stop using it everytime. It consumes a lot of energy. I am going to make a difference in my parents electricity bill. You should also try unplugging the electrical appliances you do not need. Eg: microwave, lambs, iron etc. Now that I know how precious energy is I will start to unplug all the items that I don't need and turn off the lights when I don't need them. If you don't stop misusing the energy our future could be without electricity. Conserving Energy is fun and it also saves our charming ecosystem!!!**
