

Hydro energy

Hydro energy is the best energy, at least I think it is. you can do anything with water you can drink it, make food with it, clean yourself, wash your hands and now you can make energy too! I am going to tell you all of the reasons we should use Hydro energy. Firstly, unlike coal, hydro does not kill the earth and make pollution. On the other hand it actually is good for the earth because water is a piece of earth so even if hydro energy had the same process as coal energy it would create steam not smoke/pollution so it is not harmful to the planets and also animals. Secondly unlike nuclear Hydro energy is a renewable energy which means that however many times you put it through the process it will still create energy for more than a town and that means you can play your roblox all day long!. The last reason I think we should use Hydro energy is that the dam is safe for every water animal to fish to crabs, and if they want to build a habitat near the dam they can without it getting sucked in the place and die. These are all of the reasons i think we should use hydro energy and i really hope that we start using hydro energy because it has a lot of advantages witch does not cause harm to anything
