

A Green-Powered Canada

Name Skyler Delaney

Date March 18,2021

Worksheet

Energy source Solar Energy	
Type of resource (circle one)	<u>Renewable</u> Non-renewable
Definition Solar energy is an energy generated by the sun, there are also solar panels sometimes made for electronics to charge up.	
Benefits -it can slow down your electricity bills -it can also upgrade technology devices	Drawbacks -it causes weather dependent -it can use some or lots of space -it takes time for the sun to be a certain temperature
How is this energy source being used in Canada? Solar energy is being used to charge certain cars, devices and also electricity.	
What role could this energy source have in the future? How this can be useful in the future is that you can charge your tech just by the sun. So that would be easy right...no because what if it's cloudy for a very long time? what then. So I guess it could be useful sometimes but it's my opinion.	
Provide two reliable sources for people who would like to learn more about this energy source: www.greenmatch.co
