

# Saving Energy By Hanging Up Your Laundry

In our classroom we are discussing ways to use less energy usage at home, school and our community. Hang drying your laundry is a topic that we would like to tell you about. How it saves energy is that it wouldn't cost any money to do because you can just dry your clothes on a string/door. It would also decrease your carbon footprint by approximately 2,000-3,000 per year, according to The Old Farmers Almanac. Hang drying your clothes wouldn't raise up your electricity bill, it's also good for the environment! You would save somewhere between 50-70 dollars per day. You should not use dryer sheet because it's full of bad chemicals. We both got our information from The old Farmer's Almanac and <https://retrohousewifegoesgreen.com> .
