

Ways to help the environment.

We've been wasting a lot of our energy and we need to do our part to try and stop what's been going on.

This is our carbon footprint. We've been using lots of things that are bad for the environment and we need to lower the use of everything. Use less electricity by unplugging your devices once they're charged, using less fuel and doing that would be driving only if you need to. For example you can walk to school instead of driving, you can bike ride to your friends house instead of driving if it's not a long ride.

Other ways we can help:

1. Like we said before you can unplug your devices or chords you're not using.
2. Eating more locally can help too because it helps food getting shipped to other places.
3. Line drying your clothes also helps because it is much better for the environment.

I hope you can do your part to help the environment.
