

the benefits of using an electric car

electric cars Create less emissions

Fully electric cars produce zero tailpipe emissions and over their lifespan produce fewer polluting emissions all together.

electric cars are affordable to fuel

an average gasoline car cost anywhere from \$1,000- \$2,500 a year, where as an electric car's charging is only \$300-400\$. that's up to a \$2,200 difference!

Other benefits electric cars offer

- quicker responsiveness: Electric motors react quickly giving your car better responsiveness and very good torque.
- more digital connection: many electric vehicles have the option to control it's charging by an app.
- convenience: you can save lots of trips to the gas station by just charging your electric vehicle at home.
